

Enterprise Application and Data Integration For Your Capital Improvement Program

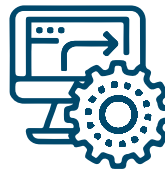

GAIN INSIGHTS INTO YOUR CAPITAL IMPROVEMENT PROGRAM (CIP) WHEN ENTERPRISE APPLICATIONS ARE EXCHANGING CRITICAL DATA POINTS

The average project manager relies on more than eight different systems to gain a true understanding of how a program is progressing and where exactly the risks lie. These eight different systems maintain key data that has been inputted and managed across departments with different objectives and time-frames that are not always aligned with the program; creating silos.

Often, data silos in an organization creates mistrust as it does not provide a holistic view of the program.

The OnIndus team of experts has decades of experience in integrating systems such as MRI, Peoplesoft, Oracle, Maximo, Lawson, Rhumbix, Sage, Kahua and Procore.

Our proven integration methodology delivers gauranteed success.

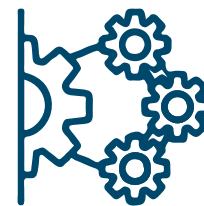

**BUSINESS
